

## Mechanical HVAC Services

*We are experts in providing most appropriate, energy efficient, cost effective HVAC solutions integrated with the latest technology and standards.*

The organization is well equipped with expertise on Estimating, Designing, Engineering and Drafting services of HVAC systems. We engineer the systems for industrial applications as well as domestic applications.

We enhance the quality of the environment inside the buildings with a well maintained level of oxygen, humidity and temperature, and we are professionals dedicated to create healthy, contaminant free, noise free surroundings for the well-being of mankind.

Industrial process cooling, ventilating, exhausting and air conditioning solutions are provided in accordance with ASHRAE, SMACNA, ARI, NFPA , standards and the experience of the professionals.

Key areas of concern are

- Central Air conditioning systems
- Chilled Water - Air cooled and water cooled
- Variable refrigerant volume (VRV)
- Industrial Ventilation and Exhaust systems
- Modern demand control ventilation and exhaust systems
- Introduction of energy saving, environmental friendly absorption type refrigeration equipment
