

## PLUMBING AND FIRE PROTECTION SYSTEMS

*We provide creative and custom tailored mechanical design services for Plumbing and Fire protection systems. Our team can effectively handle conceptual, preliminary and detailed design projects in compliance with client's requirements, latest technology and standards.*

Plumbing services cover mainly water supply, sanitation and drainage. Plumbing systems designing, engineering, drafting and estimating are the major tasks performed by us. Plumbing networks are designed in accordance with IPC, BS, NFPA standards.

### PLUMBING SERVICES

- Sewer lines and venting networks
- Standard or specialized waste water handling systems
- Waste water disposal systems
- Hot and Cold water distribution systems
- Storm water drainage systems
- Rain water harvesting systems
- Roof drain systems
- Process Piping
- Compressed air piping
- Medical gas piping systems

### FIRE PROTECTION SYSTEMS

We have the expertise for designing fire protection and prevention systems using the latest codes and technology. Our design team has the experience and familiarity of standards such as NFPA, which is valuable in developing safe and effective fire suppression systems.

- Portable and fixed fire extinguisher,
- Sprinkler systems,
- Engineered fire suppression systems,
- Fire alarm systems
- Fire detection and control systems
